

THE COMPLEX ROAD AHEAD FOR POLICY, SOCIETY AND SCIENCE

COVID 19 and future pandemics

Climate change and sustainability (food, water, energy, biodiversity loss)

Social cohesion and mental health

Conflict, nationalism and a failure of multilateralism

Humans and societies coexisting with technology

in elites including academia and science

A very complex ecosystem

INTERNATIONAL SCIENCE COUNCIL 2022 - 2024

- The ISC was formed in 2018 by the merger of ICSU (natural sciences) and ISSC (social sciences)
- ISC was formed because the two legacy organizations had recognized that their impact could be strengthened with an integrated, stronger and more effective voice
- ISC's mission is to be the global voice for (and of) science
- But to be an effective voice, those whom you talk to must
 be willing to listen ISC's priority must be to build the audience
- From 2018-2021 the focus was on merger, then progress slowed by Covid
- ISC is now progressed beyond its merger phase and is focused on implementing its priorities and building a more effective role with multiple external and internal stakeholders

BOARD'S AGREED PRIORITIES MAY – OCT 2022

- Building meaningful and sustained relationships with core components of the multilateral system
- Building more effective relationships with host government and its agencies
- Building and leveraging the fellowship
- Building a sustainable financial basis including
 - Charitable trust and fundraising, investigate legal status change
- Strengthening ISC's global presence
 - Establishing focal points, addressing gaps in membership, engaging members in UN related activities
- Delivering on the action pian with a tighter focus where the ISC can add value
 - Role of science in issues of public and common good
 - Disinformation, trust in science, science-societal interactions
 - Evolution of science systems, nature of science and relationship to other knowledge systems,
 - Future of scientific publishing, open data, open science
 - Sustainability/ Mission led science
 - Science education
 - **Private Sector relationships**
- Reviewing affiliate bodies and ISC programs for added value and optimal use
- Building members' capacity in science policy and science diplomacy interfaces
- Building profile with relevant stakeholders and building effective relations with them
- Constitutional reform

FROM THE 2024 ACTION PLAN		
Sustainability	Transformations to sustainabilityMission led science for sustainability	 Completed Report almost finalized, pilots being planned Second edition to be released soon
	Covid reportSendai review of risk and hazard	- Completed
Technology	Digital transformationsDigital technologies for sustainabilityConvergent and rapidly moving technologies	 Open science, open data CoDATA partnership Discussion starting with partners
Science in policy and society	The public value of scienceScience policy interface at global level	trust etc
	, ,	- Partnership with INGSA
Evolving science and science systems	- Open science and open data - Engaged science	 Much progress Transdisciplinary paper launched Trust in science project under planning Report to be released
	- Evaluation of science	
Freedom and Responsibility	- Diversity, inclusion and freedom	CFRS very activeUkrainian issues a focus
	- Responsible science	- continues
Enabling success	 Engaging more effectively with members Expanding membership Increasing the ISC visibility and influence Accelerating resource mobilisation 	 Regular QA, newsletters, requests Is being prioiritised Fellowship created Many relationships enhanced Presidential activity Trust being established

Activities alluded to in plan and underway:

- Science education
 Working group
 established
- Regional office development

Vision/goal: Science is used effectively to advance the global public and common good.

ů

Mission and our

core strategic

objective is to

be the leading

effective global

voice for and of

and most

science

Objectives

- Raising ISC profile and building relationships with key audiences and institutions
- 2. Coordinating and channelling science and expertise to provide high quality input and thought leadership

3. Building relationships with ISC Members, partners and global scientific community; expanding membership base.

4. Building the requisite internal (operational) capacity

Priority activities

- Cultivating relationships & partnerships with key intl stakeholders
- Developing brokerage for UN and other multilateral agencies/bodies
- Acting as an agent of science diplomacy
- Producing high quality input on critical science systems issues through a Centre for Science Future
- Producing high quality input on global existential issues, including through projects and coordination of intl scientific endeavours
- Supporting freedom and responsibility in science
- Coordinating intl. scientific endeavours
- Membership engagement & outreach (incl. host country)
- Addressing membership gaps
- Strengthening regional presence
- Building members' capacities
- Developing ISC Fellowship and patronage
- Constitutional reform
- Organizational redesign, resourcing and policy development
- Resource mobilization

Short-term outputs/results

- MoUs and partnerships with intl bodies
- Brokerage capacities
- High quality reports and recommendations, customized for audience
- Pilot projects launched
- Plan for establishment of a Pacific Island Academy
- Improved relationships with and use of ISC Affiliated Bodies
- ISC–France liaison committee established
- ISC regional focal point structure in place
- Membership gaps being filled and membership engagement increased
- Members and Fellows involved in ISC activities and supporting the ISC
- Targeted services to members
- Revised constitution and governance
- New, appropriate organizational structure, staffing and policies in place
- Charitable trusts established in the UK and donations being received

Midterm outcomes

- More effective scientific input into multilateral policy development
- Intl. scientific endeavours are better coordinated
- Enhanced ISC profile and legitimacy
- ISC is an established actor in the science diplomacy aren
- Closer and more effective relationship with host country & members
- More (and more diverse) members and membership engagement
- More effective regional presence
- ISC is operating smoothly & financially healthy
- Management & governance is appropriate for a professional body

Longer-term outcomes

ISC provides the authoritative and legitimate global voice for and of science

Science is used more effectively in policy making at scales from local to global, including in LMICs

Principles: Excellence and professionalism, inclusivity and diversity, transparency and integrity, innovation and sustainability

Partners: ISC members, Affiliated Bodies, UN and agencies, development banks, funders, etc.

THE CHALLENGE FOR THE ISC: PROFILE

- ISC is an umbrella organisation
- It is poorly understood with key external stakeholders
 - the value proposition needs to be clearly stated
- It is poorly known to the science community beyond the members' secretariat
- It is not known to the broader scientific community

Addressing this profile gap is challenging but essential if the voice of science to be both legitimate and well heard.

ISC FELLOWSHIP

Recognizes individuals for their outstanding contributions to the promotion of science as a global public good. The Fellows include eminent scientists, engineers and thought-leaders from the science-policy sphere who have made remarkable contributions to furthering understanding of and engagement with science.

- They have been asked to assist the ISC in progressing its mission as part of agreeing to be a fellow.
- Fellowship Council of 13
- Responsible for fellowship selection
- Chair of Fellowship Council attends board meetings
- Fellowship Council acts as one strategic advisory input
- 123 appointed by end of 2022, 700 by 2026
- 3 honorary fellows

Continue to enhance capacity within the scientific community

- 1: Map the competences of the ISC
- 2: Invest in an ambitious capacity building programme
- 3: Partner with other organisations to deliver scientific advice
- 4: Engage in existing intergovernmental scientific mechanisms.

Strengthen relationships in the intergovernmental system

- 7: Advocate for the establishment of a scientific advisory mechanism to the UN General Assembly.
- 8: Seek Permanent Observer status to the UN General Assembly.
- 9: Set up a liaison office in New York.
- 10: Establish a group of ISC Ambassadors

Report adopted at 2021 GA ISC and the Multilateral System

Connect the national and global levels

- 5: Strengthening connections of scientists with global processes.
- 6: Encourage the creation of a coalition of countries.

Champion science as a global public good

- 11: Strengthen the public understanding of science
- 12: Develop regular engagement with scientific and mainstream media
- 13: Support the recognition and raise the profile of transdisciplinary science

ISC IN NEW YORK

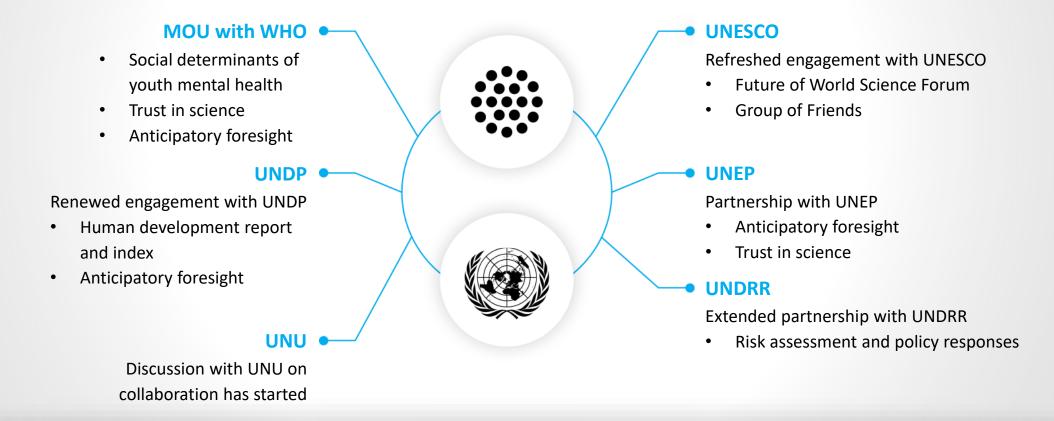

- Established a presence in New York to liaise with UN system
- Extending the well beyond its traditional and somewhat minor role as co-chair of the Major Group on Science and Technology
- Liaison with president of General Assembly
 - Inputs unto General Assembly special sessions
- Establishment of the Group of Friends on Science for Action
 - ISC to be the secretariat jointly with UNESCO
 - Strengthen use of evidence in UN policy
 - More effective links to science community
- MOU with UN DESA (Department of Economic and Social Affairs)
 - SDG summit and Summit of the Futures
 - Foresight
- Discussions with Office of Secretary General (OSG) on a Science Advisory Mechanism
- Partnership with OSG on trust in science

ISC AND ITS RELATIONSHIP WITH OTHER UN AGENCIES

Continued relationship with WMO, UNEP, UNESCO, etc. over affiliated bodies

OTHER COMPONENTS OF MULTILATERAL SYSTEM THAT WILL REQUIRE SIGNIFICANT EFFORT IN RELATIONSHIP DEVELOPMENT

- UN agencies and funds
 UNICEF, FAO, UNITAR, ITU, WIPO, UNWomen, WMO, UNCTAD etc.
 UN Foundation
- World Bank and regional Development Banks
- OECD
- World Economic Forum
- G7/S7
- G20/S20
- Regional policy groupings e.g. African Union, European Union
- Other NGOs and Foundations with overlapping or complementary interests
- Governmental ODA programs
- Global assessments (eg IPCC)

THE ISC GLOBAL COMMISSION ON SCIENCE MISSIONS FOR SUSTAINABILITY

In 2019, ISC convened the Global Forum of Funders to review science and lack of progress on sustainability.

This led to a 2-year consultation and the report – *Unleashing Science* - suggesting the general need for new approaches

As a result, the ISC established a Commission was formed in 2022

Chairs: Irina Bukova, Helen Clark

Chairs Technical Advisory Group: Albert Van Jarsveld, Pamela

Matson

New form of research funding needed:

- Global south-north partnerships
- Systems focused
- Transdisciplinary
- Actionable knowledge focused
- Evaluated for broader lessons

Initiative will be announced at High Level Political Forum, July 2023 Hope to launch pilots after global call in 2023, funding being sought

RELATIONSHIP WITH HOST COUNTRY

- The current legal status is not optimal
- The merger was associated with a significant loss of financial support
 - from the French Government
- The synergies between the host country and ISC need to be redeveloped and recognized
- The profile of the ISC in France policy circles is low
- We have been building relationships with the key players
 - Ministry of Foreign Affairs
 - Ministry of Higher Education and Science
 - Acadèmie des Sciences
 - Agence Nationale de la Recherche
 - Sciences Po, etc,
- We are establishing a host country liaison group
- Paris as a 'city of science': UNESCO, ISC, OECD

TRUST IN SCIENCE

Through CFRS, the ISC and predecessors have had a leadership role in ensuring the integrity and trustworthiness of science.

But the perceptions of science as a trustworthy input into policy and public decision making have been compromised by multiple factors, both internal to the science system and by external factors.

Covid, politics, disinformation, weaponized narratives, fake news, generative AI and the 'post-truth' gestalt have all contributed alongside a generalized decline in elites.

Science must learn better how to live alongside other knowledge systems while not compromising its principles.

The ISC has been requested to address this issue alongside the Office of the Secretary General, and the leaders of UNDDR, UNEP and WHO.

In next few weeks we will be establishing and expert group to oversee this critical project. Members can soon expect requests for nominations and assistance.

The ISC will explore other more direct initiatives, e.g. the role that faith leaders can play.

SCIENCE FUTURES

Science systems continue to evolve.

The ISC needs to serve its members by reflection on emergent issues and opportunities:

- Where, by whom, and how science is conducted
- Private and public sector science
- The emergence of transdisciplinarity
- The evolution of research assessment
- The impact of generative AI etc. on the science processes
- The long-term future of science publishing

While the operational aspects of these issues are addressed through CSP and CFRS, the longer-term issues will be the focus on the ISC's Centre for Science Futures to be launched tomorrow.

The Centre's first product is a discussion paper on

- what is science
- how it related to other knowledge systems (e.g. indigenous knowledge)
- how to evaluate transdisciplinary research

ISC AND SCIENCE DIPLOMACY

ICSU had a major role in track 2 diplomacy in the first cold war.

We now live in a more complex multipolar world with a hot conflict between two of those poles.

- ISC has been encouraged to prepare to again have a role in bridging matters once the acute conflict settles.
- We have been active in the issues of displaced scientists and reflecting on rebuilding shattered science systems

But there are many other science diplomacy issues ahead including particularly those *generated by technological developments*.

- Synthetic biology, generative AI and other rapidly emerging technologies are becoming points of diplomatic interest.
- Early discussion has started on whether some form of international assessment process for technologies is needed.

ISC MEMBERSHIP

Our legitimacy as a global voice depends on being comprehensive in our membership.

We have geographical and disciplinary gaps.

There are a large number of potential disciplinary bodies that are not yet members. Many do not fit the 'union' model.

But we also have a very complicated constitution regarding membership and the rights and obligations (voting, dues, nominations etc.) associated with it. The merger deferred resolution on a number of related issues

The scope of membership merits reflection.

The range of members does not easily fit into two categories plus affiliates.

MEMBERSHIP-LED INITIATIVES 2023

We have resolved the legal issues over seconding staff to the secretariat.

We will launch the *Heide Heckmann Fellowship*. This will provide for ISC members to second a staff member to the ISC secretariat in Paris for 3-6 months. The fellowship will provide an airfare and an accommodation/ living allow allowance of € 1500 per month. We would hope to support 1-2 fellows each year. The member is expected to continue the individual's salary during their secondment. Application details will follow.

We are proposing to the GB next week that the appropriation made in the budget to support members be used as follows:

For grants of 15-20 K for a group of 2 or more members who do not normally work together to develop a project linked to strategic priorities. The funds would be awarded in 2023 rather than drip-feeding the funds so that progress can be reported to the GA in Oman in Jan 2025.

REGIONAL ACTIVITIES

We have established new regional focal points in

- Latin America (Columbia)
- Asia Pacific (Australia) subsidiary focal points are in discussion
- In Africa we have funded Future Africa to develop a strategy for ISC in Africa.

We are working to assist the establishment of the Academy of the Pacific to support the small island states of that region.

We have conducted a regional knowledge dialogue in Africa (Cape Town Dec 2022), planning an Asian dialogue in Malaysia (Oct 2023) and in LATAM (April 2024).

ISC SPONSORED AND AFFILIATED INTERNATIONAL SCIENTIFIC BODIES

The International
Network for Government
Science Advice (INGSA)

Global Observing Systems

- Global Climate ObservingSystem (GCOS)
- Global Ocean ObservingSystem (GOOS)

International Scientific Committees

- Antarctic Research (SCAR)
- Frequencies for Radio Astronomy and Space Science (IUCAF)
- Oceanic Research (SCOR)
- Space Research (COSPAR)
- Solar Terrestrial Physics (SCOSTEP)

International Data Bodies

- Committee on Data for Science and Technology (CODATA)
- World Data System (WDS)

International Research Programmes

- Future Earth
- Climate Research Programme (WCRP)
- Integrated Research on Disaster Risk
 Programme (IRDR)
- Urban Health and Wellbeing
 Programme (UHWB)
- Comparative Research on Inequality (GRIP)

FUNDRAISING AND THE FOUNDATION

- The ISC needs a diverse income stream
- It cannot expect more from its members
- It also does not want to fall into the trap of undertaking activities simply because of income streams
- It was agreed last year to establish a Foundation/Trust to receive donations
- After legal advice this was established in the UK it is awaiting final charities Commission approval
- Our goal must be at least Euro 2 million pa. in non-targeted activities
- The trustees have indicated that the ISC must get its profile and strategy clear before fundraising is likely to be effective at the scale desired.

A COMPLEX ECOSYSTEM – A BIG CHALLENGE

- The international policy space is complex
- All science is 'political' in some respect and more so when looked at through an international framing.
- The international science ecosystem is duplicative, competitive and yet leaves gaps.
- There is competition for access, influence, and funds.
- There is an extraordinary number of scientific organisations, funders etc. acting in an uncoordinated manner.
- Multiple voices are often weaker than a singular strong voice when dealing with the policy community.
- The question is whether more effective integration/coordination is possible.
- In some areas ISC already has a role (e.g. through its affiliate bodies, linkage to GRC, GFF etc).
- Can the ISC play a greater role as a facilitator/broker/coordinator?

Vision/goal: Science is used effectively to advance the global public and common good.

ů

Mission and our

core strategic

objective is to

be the leading

effective global

voice for and of

and most

science

Objectives

- Raising ISC profile and building relationships with key audiences and institutions
- 2. Coordinating and channelling science and expertise to provide high quality input and thought leadership

3. Building relationships with ISC Members, partners and global scientific community; expanding membership base.

4. Building the requisite internal (operational) capacity

Priority activities

- Cultivating relationships & partnerships with key intl stakeholders
- Developing brokerage for UN and other multilateral agencies/bodies
- Acting as an agent of science diplomacy
- Producing high quality input on critical science systems issues through a Centre for Science Future
- Producing high quality input on global existential issues, including through projects and coordination of intl scientific endeavours
- Supporting freedom and responsibility in science
- Coordinating intl. scientific endeavours
- Membership engagement & outreach (incl. host country)
- Addressing membership gaps
